Abstract

As we know in recent 2-3 years people facing problem of covid-19 pandemic. Due to lockdown we were unable to go outside for bringing products which is required for our daily uses. Like bakery products. Then we have created a website which solve that problem and make services better to society. That types of websites are already exists but we are trying to make our website and services better in market. This website and services will be limited to ichalkarnji city. Thus this paper describes detailed information about “a website on cake shop” this will provide best bakery products.

Keywords: *Cake shop, Bakery products, Online payment*

INTRODUCTION

Now a days in 21st century all thing are available on internet. So, the marketing is also extended digitally. So, We Create the Website of the Cake shop. The Owner of the shop wanted to extract his business digitally. He has different requirements like display all Bakery products and various kinds of cakes which user have to order by that website. Also manages the Payment operations like online payment in

that website. And also displays different offers related to shop.

In these days uses of internet is increasing drastically. So with the help of that company has introduced cake ordering system. This web based online system enables customers to order cake easily via online route. These website not only help the customer to choose better one but also to the employees or company to create a viable system.

It would be very comfortable for customer to use this website of online cake ordering system. It would be free to them, they can select whichever they want and whenever they want and can make payment at ease. It reduces the time for them to make all payments. This system will surely help them to see the variety of cakes and make selection accordingly. Ultimately they will be very satisfied and owner will make good profit.

While ordering cake online they can create a cart. They can add item to the cart and it will be saved so they can make better and effective selection. After creating a cart by entering just checkout they can make order. Aftermath system will ask them for address and all details like date or pick up and any other requisite according to customer and finally that can complete the order and confirm it.

Online Cake Order is a website which enables customers to order cakes through Online. The internet users are increasing rapidly; the company has introduced Online cake ordering system for getting the orders from customers. This website not only improves customer's experiences but also eases the workload on the employees of the cake shop. It will reduce the purchasing time for the customers.

This Cake Order Website will help customers in ordering the cakes. This system will surely enhance the image of the cake and customer satisfaction will be more.

The customer can order cake items through online. Before ordering cake the customer should add items to the cart. Items are added to the cart will be saved, so that the customer can choose the other cakes as well. Customer can order cart items by entering checkout button. Even the system will ask delivery address or pick up date and time before making payment. After the payment, order details will be shown and confirmed.

Why a management system for cake booking?

Let me walk you through an incident I had some days ago. It was my friend's birthday. We were all excited. We had everything planned except for the cake. My responsibility was to book a cake for my friend. So, first of all, I had to find out a suitable shop, and before that, any cake shop. It was late in the night. Most of the shops were closed.

So, I wandered around the street and somehow, I manage to find a cake shop. But no, my misery is not going to end. The

shopkeeper had only two cakes so it was impossible to select the best cake for my friend. I chose one cake from half of my heart and asked the price for the cake. The shopkeeper knew that I was helpless and needed the cake badly so he almost doubled the price. I have no option but to buy the cake at that price. This was a bad experience for me but this gave me a revolutionary idea. I thought what if I ordered the cake just sitting anywhere from the area. I could order it when I think of it.

“Oh! I have to order a cake. I will go to the shop whenever I get time, select it and order it.” I thought why this much hassles. Why not order the cake as soon as the thought crosses your mind. You can choose the best cake right at that time. Being a computer science grad, that is where I came up with the idea of an “online cake ordering system”.

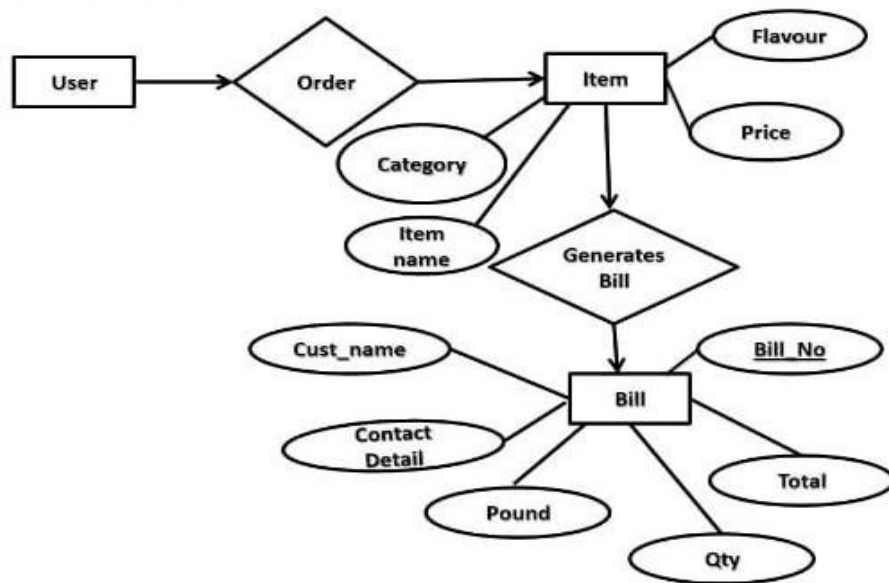

Actual Methodology Followed

- A. First, we form group of four students for this project.
- B. Then we search project topics.
- C. Then after searching and discussing we list out some project topic for final year project
- D. Then we give the list of three guide options to subject guide.

- E. Then after allocating project guide we meet to guide with listed project Titles.
- F. Then by getting suggestions we decided our project title.
- G. Then we research some journal papers related to Cake shop website
- H. Then we take shop sponsors to display their products on this shopping site.
- I. Then we decided some languages in which this project will implement very well.
- J. Then we start to learn such languages like Asp.Net, C#.
- K. Then we simply create the structure of our website.
- L. After that we create the project report & proposal.
- M. And then start to create this website.
- N. Give the presentation on project report.
- O. Submit the report & proposal to project guide

Online Cake Ordering System

Is one of the most innovative ideas of this era. It will make a person's life easier in a dramatic way. If a person wishes to buy a cake, that person just has to go to this system, select the cake, provide some important information and make the payment and BAM! The cake would be at their doorstep or any person can collect it all by themselves from the shop.
